

**WISCONSIN STATE CRIME LABORATORIES
UNIT DEVIATION REQUEST FORM**

Printed Name of Requestor: Sherry Culhane

Date: 04-10-06

Deviation applies to (Manual/Section or form): STR manual – case no. M05-2467

Reason for Deviation (Cite instance for which deviation is requested):

Two samples (washings from bullet fragments – items FK and FL) were extracted with a manipulation control (MC12). After typing the sample with the highest concentration of recovered DNA (item FL) and the MC12 at the same concentration, my own profile was developed in the MC12. The sample profile from item FL is a single source profile.

Proposed Deviation (Use additional pages if necessary):

Normally the sample would be re-extracted, but in this case there is no sample to re-extract. According to our current protocol, this sample would be only used for exclusionary purposes. However, in this case the presence of my DNA in the manipulation control does not interfere with the interpretation of the profile from sample FL. Therefore, I propose a deviation from the protocol allowing me to use sample FL for inclusionary purposes.
